

M2U | Logistics

THE WAREHOUSE MOBILE PICKING APPLICATION

M2U|Logistics solution has been developed to expedite the tracking of all your company stock warehouse movements. Reception of supplier orders, client orders picking, client returns and returns to suppliers, transfers across warehouses or inventory counts, can all be made right from the warehouse on a quick and easy way. This software solution was developed like an add-on to the existing ERP, extending its scope to the warehouse, while all stock management continues to be managed by the ERP.

"The application has streamlined the separation processes we've been looking for a long time. Moving2U is always available to improve the application according to our requirements"

- Aveicellular

BENEFITS

- + Speeds up procedures
- + Minimizes errors
- + More control

STOCK MANAGEMENT

- + Batch numbers
- + Serial numbers
- + Traceability

1D/2D Barcode Scanning

The integrated optical scanning is based on the device manufacturer's SDK. This way, the application is able to fully control the reader and gather the full details on the barcodes being read. Additionally, the application is able to control GS1-128 split barcodes and instruct the user to read the remaining ones. The application supports several common barcode symbologies, namely Data Matrix and QR codes.

Zebra MC92

THE MOBILE LOGISTICS SOLUTION THAT YOUR ERP HAS BEEN MISSING

The architecture of the solution was designed to support connectivity with different ERPs, relying on the specific integration mechanisms provided by their manufacturers. Moving2U works closely with the leading producers of management software, ensuring compatibility with new versions and product lines, as well as ensuring the integrity of the integration process and compliance with defined rules*. The list of supported ERPs is being extended to support more products. Please contact us to know if your ERP is already supported or if you would like us to support the ERP your company is using or developing.

Supported devices

- Barcode reader enabled devices with Windows Mobile 6.x/Windows Embedded Handheld 6.5 (e.g.: Zebra/Motorola Symbol ...)
- Label printers (e.g.: Zebra ...)

The continuous development of this solution ensures that our clients have access to new features as they are being added, as well as support to new types of devices and operating system versions. Android and Windows 10 versions of the mobile app are being added to the solution and will be available on 2018 Q1.

* Updates are available to clients under warranty or a valid software maintenance agreement.

Label printing

The software is able to print to Zebra printers, using the appropriate template for each scenario. The available templates are automatically identified based on the current document type, product, customer or supplier. The mobile solution can even create labels to identify boxes and other type of containers where the product items are to be placed and generate SSCC labels.

HIGHLIGHTS

WIRELESS INFRASTRUCTURE

The hybrid online/offline communications model allows the user to perform most of its tasks, regardless if there is no full wireless coverage on site. The system can also run on a public mobile network.

ADAPTABLE TO CLIENT PROCEDURES

Flexibility is a distinguishing feature of the M2U|Logistics solution, meaning that it is very customizable and can be adapted to the business processes of each client, while remaining as a standard product with low maintenance costs and without compromising its evolution.

Supported documents

The flexible architecture of the solution allows a quick configuration of different types of documents and tasks as well as all the definitions associated, namely if it should be based on a document coming from the ERP or a document created manually.

- Supplier order receptions
- Transfers across warehouses
- Client order picking
- Picking list
- Customer return, with or without RMA control
- Returns to suppliers
- Inventory counting, with or without a preset list of product items to be counted
- Supply of raw materials to production, based on a manufacturing order
- Warehouse reception of production from manufacturing
- Other types of documents

Warehouse tasks can be based on documents coming from the ERP that were originated in other applications. Online sales from an eCommerce website or orders collected by sales representatives with the M2U|Sales mobile solution can be fulfilled and shipped in the same day.

ABOUT US...

What we do

The core business of Moving2U is the development of mobile applications for processes optimization, either as a product or as a custom development, extending its applicability to various domains:

Products

- M2U|Logistics - Internal logistics
- M2U|Sales - Sales force automation
- M2U|FieldServices - Field services assistance

Projetos

- MRW (Spain/Portugal) - Proof Of Delivery
- Auchan Supermarkets (Portugal) - PSS Self Scanning, Picking
- Sonae / Continente (Portugal) - Picking

Platforms

Moving2U is focused on developing mobile Line-of-Business applications for the most common platforms:

- Android: Smartphone / Tablet
- Windows 10: Smartphone / Tablet / PC
- Apple iOS: iPhone / iPad
- Windows Embedded Handheld 6.5

Goals

Settle the Moving2U brand and be one of the leading players in the field of logistics and mobile sales is one of the clear objectives of the company. Moving2U wants to continue to be a reference in the IT business sector in the area of enterprise mobility, recognized for developing software with high quality standards, based on a sustained strategy, planned with rigor, sense of responsibility and competence.

Develop mobile applications that allow our customers to: optimize processes; increase efficiency and eliminate waste; provide significant increases in productivity and profitability; contribute to an increase in the quality of life of its employees.

Partnerships

The specialization of companies working towards the continuous improvement of their offer naturally creates the need to develop synergies between them, in order to complement the mutual offer of more comprehensive solutions. Since 2003, Moving2U has established solid partnership relationships with other companies based on the complementarity of their offers and on mutual trust, continuing to focus on this path around 4 vectors:

- Close collaboration with leading industrial mobile devices manufacturers to use official SDKs and to participate in new equipment pilot programs
- Establishment of technological partnerships with leading software companies
- Direct intervention on reference clients
- Strategic alliances with business partners.

All trademarks and registered trademarks are property of their respective owners.
